==========
GENESIS POINT — GENESIS STONE MINING & LABOR SYSTEM (CANONICAL OVERVIEW)
==========

SECTION SCOPE:
- Genesis Stone formation, mining mechanics, dust handling
- Energy pocket behavior and color stratification
- Labor classes (free miners vs penal labor)
- Penal mining doctrine and neurological consequences
- Economic linkage to ELN currency reserves

---
I. GENESIS MINES — FUNDAMENTAL DEFINITION
---

• Genesis mines are NOT ore deposits.
• They are localized energy pockets embedded in the world's structure.
• These pockets act as conduits / capacitors that accumulate energy and periodically release it.

• Mines exist simultaneously at:
  - deep structural (subsurface) levels
  - accessible cavern-scale levels

• Energy buildup → threshold → release → rapid stone formation.

---
II. COLOR PURITY RULE (MONOCHROMATIC CAVERNS)
---

• Each Genesis mine produces EXACTLY ONE stone color.
• No mixed colors exist within a single mine.
  - No red/blue
  - No yellow/violet
  - No gradients

• Color is determined by the stable energy density of the pocket.
• If density changes, the mine becomes a different mine (rare, catastrophic).

---
III. GENESIS STONE GROWTH MECHANICS
---

• Stones form ONLY during energy release events.
• Growth is rapid, not gradual.

Formation sequence:
  1. Bead-scale nucleation points
  2. Expansion into marble-sized stones
  3. Honeycomb / lattice self-organization within the cavern

• Once the cavern reaches its preferred structure:
  - New stones STOP forming

- Structure remains until stones are removed

• Removing stones allows the pocket to reset and recharge.

---

IV. EXTRACTION RULE — WILL-BASED REMOVAL

---

• Genesis Stones cannot be pried, cut, or forced free.
• Mechanical force fractures structure → total collapse into dust.

• Proper extraction requires:
- Direct physical contact
- Full bodily engagement
- Focused, sustained will

• When successful, the stone releases itself.
• Miners describe this as the stone "letting go."

---

V. GENESIS STONE DUST — SECONDARY STATE

---

• When a stone breaks, its internal structure collapses.
• The stone ceases to exist as a Genesis Stone.

• Dust properties:
- Energy density WITHOUT structure
- Cannot be absorbed by a person
- Cannot self-stabilize
- Inert unless acted upon by an external field

• Uncontrolled breakage:
- Dust disperses violently
- Difficult or impossible to recover
- Common in mines → economic loss

---

VI. ALCHEMY & CONTROLLED FRACTURE

---

• Alchemists intentionally convert stones into dust
using controlled fracture inside sealed rooms.

• Alchemical chambers provide:
- Containment
- Temporary structure (room field)
- Energy shaping and regulation

• Dust is used as:
- Energetic driver
- Transformation catalyst
- Conversion force (not a consumable fuel)

• Dust supplies energy; it does not become the product.

---
VII. ELN CURRENCY BACKING
---

• ELN is backed by Genesis Stones held in reserve.
• Value is based on guaranteed convertibility into dust.

Economic model:
- Whole stones = stored potential
- Dust = divisible, usable energy

• Licensed fracture chambers regulate conversion.
• Unregistered stone breaking is a major crime.

---
VIII. STANDARD MINING CYCLE (FREE MINERS)
---

• Typical resonance cycle: ~17 days

Days 1–13 : Stable harvest
Days 14–15 : Rising instability
Days 16–17 : Evacuation + energy release

• Free miners evacuate by Day 14.
• Release occurs with NO personnel present.

---
IX. COLOR-SPECIFIC DANGER LEVELS
---

RED:
• Lowest density
• Survivable with red stone absorption
• Energy release causes extreme pain, not death

ORANGE:
• Moderate danger
• Requires absorption for extended exposure

YELLOW:
• Lethal without protection
• Requires orange or yellow stone absorption
• Strict work windows

GREEN:
• Severe systemic danger
• Requires higher protection
• Often used for penal labor

BLUE / VIOLET:

• Immediately lethal without matching absorption
• Extremely rare, small caverns
• Reserved only for trusted elite miners
• Never used for penal labor

---

X. PENAL MINING — WORK MINES

---

• Work Mines are separate from free mines.
• Used as sentence for serious or repeat crimes.
• Purpose: extract labor, not rehabilitate.

• Typically assigned to:
  - Orange
  - Yellow
  - Green mines

• Blue and violet mines are forbidden to convicts.

---

XI. EXTENDED EXPOSURE DOCTRINE

---

• Penal mines follow the same cycle but push limits.

• Condemned miners work:
  - 1–2 extra days closer to release (e.g., Days 14–16)
  - Evacuated before the actual release (labor is not wasted)

• Foreman incentives:
  - Maximize yield
  - Accept higher mortality
  - Avoid catastrophic loss of the cavern

---

XII. RED MINES — CONTINUOUS LABOR UNDER PAIN

---

• Red energy release is non-lethal with red stone absorbed.
• Produces repeated, electrical-shock–like pain.

• Penal red mines:
  - No evacuation
  - No rest days
  - Full quota required during release

• Purpose: deterrence and endurance punishment.

---

XIII. LONG-TERM NEUROLOGICAL EFFECT

---

Name:

• Red Resonance Syndrome (canonical)

Mechanism:
• Repeated neural excitation overwrites signaling pathways.
• Life preserved, nervous system damaged.

Effects:
• Tremors
• Chronic pain
• Loss of fine motor control
• Delayed responses
• Permanent neurological instability after repeated exposure

• Short sentences: partial recovery possible.
• Repeated sentences: irreversible crippling.

• Society treats visible symptoms as a mark of repeated guilt.

---
XIV. LEGAL & CULTURAL FRAME
---

• Penal mining is framed as:
  “Loss of early withdrawal rights,” not execution.

• Red mines punish.
• Yellow/green mines erase.
• Blue/violet mines are reserved for trust, never punishment.

Cultural sayings:
• “Red teaches you.”
• “Yellow kills you.”
• “Green forgets you.”

---
XV. CROSS-THREAD REMINDERS (FOR MASTER CHECKLIST)
---

• Days / months / years have Genesis Point–specific naming
  (defined in separate thread; must be referenced, not redefined here).

• Genesis Stones:
  - Are events, not materials
  - Defined by structure, not substance

• Dust:
  - Energy without memory
  - Cannot be absorbed
  - Requires external structure (room field)

• Mining, alchemy, economy, and law are one system.
